SUMMARY

Engineering leader with 19 years of experience in enterprise software, specialising in moving LLMs from proof-of-concept to production-grade, regulated environments. At UBS, I integrated, architected and shipped four Agentic AI systems using LangGraph, AutoGen, and Azure OpenAI — reducing enterprise migration cycles by 5 weeks per engagement and cutting per-migration effort from 3 weeks to 4 days.

I focus on building verifiable, AI — not demos — integrating RAGAS evaluation, semantic caching, and OpenTelemetry observability to ensure reliability at scale. Alongside AI work, I have led 69 enterprise cloud migrations, managed 30+ vendor professionals, and driven a 23% reduction in AI infrastructure spend through workload optimization.

A 19-year career spanning CMC Ltd, S1 Corporation, Boston Byte LLC, Zensar Technologies, and UBS — grounded in backend engineering across Python and Java, with hands-on delivery across React frontends, CI/CD pipelines, and cloud infrastructure. Earlier roles built strong architectural instincts: designing distributed systems at S1, owning end-to-end solution delivery at Boston Byte, and leading Lean-driven DevOps transformation at Zensar.

CORE COMPETENCIES

AI & ML: Generative AI, Agentic AI, LLM Orchestration (LangChain, LangGraph, AutoGen), RAG Pipelines, Vector Database, MCP (Model Context Protocol), LLM-As-a-Judge, LLMops (RAGAS/OTel), GitHub Copilot.

Cloud & Architecture: Azure Cloud, Azure Foundry, AWS, Microservices, Azure Kubernetes (K8s), Docker, Serverless, Redis Caching, Event-Driven Architecture.

Stack: Python, FastAPI, Java/J2EE, ReactJS, Spring Boot, SQL, OpenTelemetry (OTel), ELK Stack, PostgreSQL and pgvector, Fine-tuning, LLMops, Pydantic AI, LLM quantization

Technical Leadership: Program Management, Vendor Governance (30+ resources), Agile/Scrum, Digital Transformation, Banking Compliance.

PROFESSIONAL EXPERIENCE

UBS <i>Associate Director — Senior Solution Engineering</i>	Jan 2019 – Present <i>Pune, India · BFSI</i>
---	--

Agentic AI & Platform:

- Built agentic pipelines using LangGraph and AutoGen on Azure OpenAI, replacing a 12-step manual process — reducing per-migration effort 3 weeks to 4 days.
- Designed multi-agent workflows that cut 5 weeks off each enterprise migration engagement, with measurable impact on client delivery timelines.
- Built RAGAS-based evaluation frameworks to validate multi-step LLM chains before production deployment, ensuring enterprise-grade reliability.
- Delivered four Agentic AI use cases: multi-agent software assistance (LangGraph + Aider), a RAG-based Consultancy Portal (LangChain), an Enterprise Productivity Hub (React + GPT), and an AutoGen-powered debugging assistant.

Delivery & Leadership:

- Worked as Lead for the Application Migration Factory, delivering 69 enterprise migrations across hybrid and Azure cloud environments.
- Managed 30+ vendor professionals on-site, covering onboarding, operational readiness, and mandatory compliance training.
- Served as Software Component Manager — bridging vendor teams and the CTO office to ensure all cloud-native services met banking cybersecurity and regulatory standards.
- Migrated 43 Tableau reports to Power BI, managing data refresh schedules and access controls — giving CTO, stakeholders, core team real-time visibility into delivery health.

Engineering Culture:

- Established team-wide documentation spanning LLM best practices, Azure cloud runbooks, and security hygiene — converting tribal knowledge into institutional memory.
- Drove GitHub Copilot adoption across the engineering team, improving development velocity and code quality.

- Partnered with cross-functional leadership—including the CTO and SRE teams—to pilot and validate high-impact developer tools and BI platforms. Performed critical trade-off evaluations and vendor assessments, ensuring that technical feedback was integrated into scalable, organisation-wide deployments.

Boston Byte LLC

Architect

July 2018 – Nov 2018

Pune, India · Healthcare (HLS)

- **Full-Stack Strategy:** Served as Lead Architect for "Wello Central," a cross-platform healthcare application using Java, SpringIO, Microservices, and Netflix OSS.
- **Cloud Infrastructure:** Engineered microservices deployment on AWS Cloud with automated CI/CD pipelines for high availability and scalability.

Zensar Technologies

Oct 2009 – July 2018

Solution Architect (July 16 to Jul 18)— Lead Technical Specialist (Jul 11 to Jul 16) — Sr. Software Engineer (Oct 09 to Jun 11)

Pune, India · Manufacturing — BFSI

- **Cloud Transformation:** Migrated 37 legacy web apps to AWS over 18 months; rewired the CI/CD pipeline with Jenkins + Docker, taking release cadence from monthly to daily — a 30× improvement teams still reference.
- **Data Architecture:** Designed a Data-as-a-Service (DaaS) platform to ensure data integrity and resolve "source of truth" conflicts for manufacturing analytics (Cisco Data Lake).
- **System Optimization:** Redesigned compliance management services, achieving a 30% reduction in process time and significant mitigation of client penalties.
- **End-to-End Delivery:** Led team with architecture decisions and full lifecycle delivery of enterprise web applications using J2EE, Spring Framework, and PL/SQL — owning enhancement development, rigorous Java and PL/SQL code reviews, monthly release orchestration, and impact analysis across change cycles. Served as the primary client-facing technical interface, translating business requirements into specifications and leading business acceptance testing and deployment approvals.

Earlier Experience: Software Engineer at S1 Corporation (2008-2009)

Pune, India · BFSI and CMC Ltd

(2006-2008) *Mumbai, India · PSU* , and **Product Development Engineer at Blue Star Ltd (2004-2006).** *Mumbai, India · Manufacturing*

CERTIFICATIONS & EDUCATION

Education	B.E. Mechanical Engineering, Amravati University
Certifications	NVIDIA Certified Professional: Agentic AI (2026) · Azure Fundamentals (2023) · GitHub Copilot Productivity (2025) · Claude Code in Action (2026) · CSM — Certified ScrumMaster (2016) · SAFe 4 Agilist (2017) · Cisco Security Ninja (2015) · SCJP 1.4 (2006)
